

Eschlikon, August 2017

## Press release

### corvaglia at drinktec 2017 in Munich

drinktec – the world’s leading trade fair for the beverage industry – will open its doors from 11 to 15 September 2017. For corvaglia, drinktec is one of the highlights of the year because it gives the company the opportunity to have many interesting conversations about closure solutions. The expert team of corvaglia would be delighted to discuss any topic around beverage closures with their visitors on **Stand 302 in Hall A4**.

Potential topics for discussion are the latest information about efficient closure solutions from Corvaglia Closures plants in Switzerland and Mexico or Corvaglia Mould & Technology's sophisticated closure design and durable, highly precise moulding technology.

For example a corvaglia ‘Aqua 2522’ injection mould can be witnessed in live action. Together with partners Engel (Stand 324, Hall A4) and HRSflow corvaglia will have an injection mould in use at the fair, which is operated in exactly the same way at the Corvaglia Closures plant in Switzerland. corvaglia is aware that it is not the only company to produce four million closures a day out of one mould. However, there are not many other closure companies who produce such four million closures using less than 3.5 tons of resin and still meet the most stringent requirements of bottlers.

Some of the caps are printed during the exhibition using a digital printer from IMDvista (Stand 115, Hall B5). corvaglia is glad to be the first beverage closure manufacturer that uses a digital printing solution which is able to match the high speed of its own mould technology. This will enable limitless, yet economic options for printing caps in the future.

corvaglia's ‘Aqua 2522’ mould is operated at the Engel stand (Stand 324, Hall A4). Printed cap samples are available on corvaglia’s stand.

At drinktec sales managers for all regions of the world will be present at corvaglia’s booth. Among them corvaglia representatives that are able to provide visitors with first-hand information about the upcoming market launch of Corvaglia Closures USA, Inc. with a closure manufacturing facility in the Southeastern USA.

# corvaglia

corvaglia is a highly specialized provider of closure solutions for the beverage industry. Founded in 1991, the company today employs a global total of over 260 staff at its headquarters in Eschlikon, Switzerland, and an additional manufacturing plant in Mexico.
